

Collections

Session 7

Contents

- ▶ Need of collections
- ▶ Collection interfaces – List & Set

Why collections?

- ▶ Array size is fixed. Size can't be increased or decreased dynamically.
 - In actual development scenario, same type of elements need to be processed dynamically.

Why Collections?

- ▶ Data may be obtained from various data sources.
 - Values obtained may be single or multiple.
 - Depending upon number of values we need to change the method.

Collections

Collection Interface Hierarchy

Collection Interfaces

Interface	Description
List	Represents a collection of objects that is accessed via index. Ordered collection. Allows duplicates.
Set	Represents a collection that contains no duplicates. An order is not fixed.
Map	Represents a collection of key-value pairs.

List Interface

- ▶ Ordered collection.
- ▶ May contain duplicates.
- ▶ Implemented by classes
 - ArrayList
 - LinkedList
 - Vector

Set Interface

- ▶ Collection of unique elements.
- ▶ No duplicate elements are allowed.
- ▶ Collection is not any particular order.
- ▶ Implemented by
 - HashSet
 - LinkedHashSet
 - EnumSet
 - TreeSet

Thank
you!
